

Aloe Arborescens

Aloe Arborescens has the same properties of other Aloes, like Aloe Vera (Barbadensis Miller), but contains **More Properties for Therapeutic and Cosmetic Applications**, allowing it to be substituted for Aloe Vera in almost every way. Aloe Arborescens is a single root plant which produces an average of two kilos of raw material per year per plant, while the Aloe Vera plant produces six.

Our Aloe Arborescens cultivars began in 1991. Harvested from a **Privately Owned Farm of 22 Acres** with the room for more breeding grounds that can produce **Infinite new plants**. Aloe Arborescens is known to **Mature after 7 years providing the best Nutritional Properties**.

Characteristics of Aloe Arborescens

The texture of the leaf is soft and inside is a gel (Arborescens Aloe Gel) or wet "**Mucilage**" which is protected by the woven outer leaf.

Although scientists have not yet discovered all the secrets related to Aloe Arborescens, it is recognized that the **Multiplicity of Properties** which are contained, give to the Aloe's characteristics with **Therapeutic Value**.

Aloe Arborescens consists of more than **70 Essential Properties** including **Vitamins, Minerals, Enzymes, Proteins, Amino Acids and Antioxidants**.

Aloe Arborescens has demonstrated that when taken orally or externally, often provides many **positive health benefits**.

The results obtained from the use of Aloe Arborescens encourage scientists to continue with studies and scientific research.

Today, with a diversity of products on the market, it is evident that there is a growing recognition of the **Properties and Benefits** that products made of Aloe Arborescens provide.
